### Summary:

Since 1st Jan, 1060 cases are classified as the following: 58% lab-confirmed and 42% clinically diagnosed. Measles is still in interepidemic phase. The incidence rate for past 52 weeks was 19.6/100000, and the incidence rate for the past 4 weeks was <0.1/100000. The high risk age groups are under 5 years followed by the 5-9 years. For children aged 1-9 years, 29% received at least 1 measles containing vaccine.

1. **Cumulative number (2019)** = 1060

2. **Number of measles cases by time: weekly histogram**

3. **By time: monthly cases and rates (/100000)**

4. **By place: counts and incidence rates (/100000)**

5. **By age group, vaccination status and nationality: counts, incidence rates for past 52 weeks, and %**

6. **By sex**

7. **By hospital admission and reporting sites**

8. **By classification**
