1 VIII.A. Introduction

2

| 3 | A Post-Authorization Safety Study (PASS) is defined as any study relating to an authorized medicinal |
|----|--|
| 4 | product conducted with the aim of identifying, characterizing or quantifying a safety hazard, confirming |
| 5 | the safety profile of the medicinal product, or measuring the effectiveness of risk management measures. |
| | |
| 6 | A PASS may be initiated, managed or financed by a Marketing Authorization Holder (MAH) voluntarily, or |
| 7 | pursuant to an obligation imposed by the national competent authority. |
| 8 | This Module concerns PASS which are clinical trials or non-interventional studies and does not address |
| 9 | non-clinical safety studies. |
| 10 | A PASS is <u>non-interventional</u> if the following requirements are cumulatively fulfilled: |
| 11 | - The medicinal product is prescribed in the usual manner in accordance with the terms of the |
| 12 | marketing authorization; |
| 13 | - The assignment of the patient to a particular therapeutic strategy is not decided in advance by a |
| 14 | trial protocol but falls within current practice and the prescription of the medicine is clearly |
| 15 | separated from the decision to include the patient in the study; and |
| 16 | - No additional diagnostic or monitoring procedures are applied to the patients and epidemiological |
| 17 | methods are used for the analysis of collected data. |
| 18 | Non-interventional studies include: |
| 19 | - Database research or review of records where all the events of interest have already happened |
| 20 | (this may include case-control, cross-sectional, cohort or other study designs making secondary |
| 21 | use of data); |
| 22 | - Those involving primary data collection (e.g. prospective observational studies and registries in |
| 23 | which the data collected derive from routine clinical care), provided that the conditions set out |
| 24 | above are met. |
| 25 | If a PASS is a clinical trial (i.e. interventional study); the Ministerial Resolution MR #1159/2014, the legal |
| 26 | provisions for research submission including requirements for clinical trials/studies/researches approval, |
| 27 | and the Ministerial Resolution MR #141/2016 regarding the procedure for authorizing the national |
| 28 | Institutional Review Board/Independent Ethics Committee (IRB/IEC) (both issued by the Ministry of Public |
| 29 | Health (MoPH)) are to be followed. |
| | |

- 30 The above-mentioned ministerial resolutions can be accessed through the following links:
- 31 <u>https://moph.gov.lb/userfiles/files/HealthCareSystem/Pharmaceuticals/ClinicalTrial/Decision1159-</u>
- 32 <u>2014.pdf</u>
- 33 <u>https://moph.gov.lb/userfiles/files/HealthCareSystem/Pharmaceuticals/ClinicalTrial/Decision141-</u>
- 34 <u>2016.pdf.</u>
- 35 The purposes of this Module are to:
- Provide general guidance for the transparency, scientific standards and quality standards <u>of non-interventional PASS</u> conducted by MAHs <u>voluntarily</u> or <u>pursuant to an obligation imposed by the</u>
 <u>national competent authority</u> (section VIII.B.);
- Describe procedures whereby the national competent authority may impose to a MAH an
 obligation to conduct a clinical trial or a non-interventional study (section VIII.C.2.), and the impact
 of this obligation on the risk management system (section VIII.C.3);
- Describe procedures that apply to non-interventional PASS imposed as an obligation for the protocol oversight and reporting of results (section VIII.C.4.) and for changes to the marketing authorization following results (section VIII.C.5.).
- 45
- 46 VIII.B. Structures and processes
- 47

48 VIII.B.1. Scope

- 49 The guidance in section VIII.B. applies to <u>non-interventional PASS</u> which are initiated, managed or financed
- 50 by a MAH and <u>conducted in Lebanon.</u>
- 51 This guidance should also apply to studies <u>conducted outside Lebanon</u>, as long as they have been imposed
- 52 or deemed necessary by the national competent authority of Lebanon (studies defined in Module V).
- 53 This guidance applies to studies that involve primary collection of safety data directly from patients and
- 54 healthcare professionals and those that make <u>secondary use of data previously</u> collected from patients
- and healthcare professionals for another purpose.
- 56

57 VIII.B.2. Terminology

58

59 Start of data collection: the date from which information on the first study subject is first recorded in the study dataset or, in the case of secondary use of data, the date from which data extraction 60 61 starts. Simple counts in a database to support the development of the study protocol, for example, to inform the sample size and statistical precision of the study, are not part of this definition. 62 63 End of data collection: the date from which the analytical dataset is completely available Analytical dataset: the minimum set of data required to perform the statistical analyses leading to 64 • the results for the primary objective(s) of the study. 65 Substantial amendment to the study protocol: amendment to the protocol likely to have an impact 66 on the safety, physical or mental well-being of the study participants or that may affect the study 67 results and their interpretation, such as changes to the primary or secondary objectives of the 68 study, the study population, the sample size, the study design, the data sources, the method of 69 70 data collection, the definitions of the main exposure, outcome and confounding variables or the statistical analytical plan as described in the study protocol. 71 72

Date at which a study commences: date of the start of data collection.

73 VIII.B.3. Principles

- 74 A post-authorization study is classified as a PASS when it has one of the following objectives:
- 75 To quantify potential or identified risks;
- To evaluate the risks of a medicinal product used in a patient population for which safety information is limited or missing (e.g. pregnant women, specific age groups, patients with renal or hepatic impairment or other relevant comorbidity or co-medication);
- To evaluate the risks of a medicinal product after long-term use;
- To provide evidence about the absence of risks;
- To assess patterns of drug utilization that add knowledge regarding the safety of the medicinal product or the effectiveness of a risk minimization measure (e.g. collection of information on indication, off-label use, dosage, co-medication or medication errors in clinical practice that may influence safety, as well as studies that provide an estimate of the public health impact of any safety concern);
- To measure the effectiveness of a risk minimization measures.

Whereas the PASS design should be appropriate to address the study objective(s), the classification of a post-authorization study as a PASS is not constrained by the type of design chosen as long as it fulfils the criteria set above. For example, a systematic literature review or a meta-analysis may be considered as PASS depending on its aim.

91 The below guidelines provide relevant scientific guidance that should be considered by MAHs and 92 investigators during the development of the study protocol.

- 93 The European Network of Centres for Pharmacoepidemiology and Pharmacovigilance (ENCePP):
 94 https://www.encepp.eu/standards and guidances/index.shtml;
- 95 Guidelines for Good Pharmacoepidemiology Practices (GPP):
- 96 <u>https://www.pharmacoepi.org/resources/policies/guidelines-08027</u>

97 To note that non-interventional PASS should not be performed where the act of conducting the study

- 98 promotes the use of a medicinal product.
- 99

100 VIII.B.4. Study registration

101 In order to support transparency in all non-interventional PASS and to facilitate exchange of 102 pharmacovigilance information between the national competent authority and the MAH, the MAHs 103 should notify the national competent authority of all non-interventional PASS required in the risk management plan agreed on or conducted voluntarily. In addition, registration in the Lebanon Clinical 104 105 Trials Registry (LBCTR) is highly recommended. The LBCTR is an online primary registry of clinical trials 106 being undertaken in Lebanon. It will allow registration for investigational (mandatory for some types of 107 interventional studies) as well as observational studies (optional). LBCTR is accessed through the following 108 link for more details concerning the registration procedure for a specific type of study undertaken by MAHs: https://lbctr.moph.gov.lb/LBCTR/. 109

110

111 VIII.B.5. Study protocol

- 112 All PASS must have a written study protocol before the study commences.
- 113 The study should follow a scientifically sound protocol developed by individuals with appropriate scientific
- background and experience. Where present, national requirements should be followed to ensure the well-
- being and rights of the participants (see MR#1159/2014).

- 116 The MAH is required to submit the protocol to the national competent authority in Lebanon.
- 117 In order to ensure compliance of the MAH with its pharmacovigilance obligations, the Qualified Person

responsible for Pharmacovigilance (QPPV) or the Local Safety Responsible (LSR) (see Module I) should be

- involved in the review and sign-off of study protocols conducted in Lebanon.
- 120
- 121 VIII.B.5.1. Format and content of the study protocol
- 122 The format and content of the study protocol should follow the format described below:
- 123 Title;
- 124 MAH;
- 125 Responsible parties;
- 126 Abstract;
- 127 Amendments and updates;
- 128 Milestones;
- 129 Rationale and background;
- 130 Research methods;
- 131 Protection of human subjects;
- 132 Management and reporting of adverse reactions;
- 133 Plans for disseminating and communicating study results;

134 - References.

- 135
- 136 For more details, refer to Module VIII of the European Medicines Agency (EMA)'s Guideline on good
- 137 pharmacovigilance practices, through the following link:
- 138 <u>https://www.ema.europa.eu/en/human-regulatory/post-authorisation/pharmacovigilance/good-</u>
- 139 pharmacovigilance-practices#final-gvp-modules-section
- 140
- 141 VIII.B.5.2. Substantial amendments to the study protocol
- 142 The study protocol should be amended and updated as needed throughout the course of the study.
- 143 Any substantial amendments to the protocol after the study start should be documented in the protocol
- in a traceable and auditable way including the dates of the changes. If changes to the protocol lead to the
- 145 study being considered an interventional clinical trial, the national competent authority should be

- informed immediately and the study should subsequently be conducted in accordance with theaforementioned ministerial resolutions accessed through the links below:
- 148 https://moph.gov.lb/userfiles/files/HealthCareSystem/Pharmaceuticals/ClinicalTrial/Decision1159-
- 149 <u>2014.pdf</u>
- 150 https://moph.gov.lb/userfiles/files/HealthCareSystem/Pharmaceuticals/ClinicalTrial/Decision141-
- 151 <u>2016.pdf.</u>
- 152
- 153 VIII.B.6. Reporting of pharmacovigilance data to the national competent authority
- 154

155 VIII.B.6.1. Data relevant to the risk-benefit balance of the product

156 The MAH should monitor the data generated while the study is being conducted and consider their implications for the risk-benefit balance of the medicinal product concerned. Any new information that 157 158 may affect the risk-benefit balance of the medicinal product should be communicated immediately in writing as an emerging safety issue to the national competent authority in Lebanon. Information affecting 159 160 the risk-benefit balance of the medicinal product may include an analysis of adverse reactions and aggregated data. This communication is without prejudice of the information on the findings of studies 161 which should be provided by means of PSURs (see Module VII) and in the Risk Management Plan (RMP) 162 163 updates (see Module V) where applicable.

164

165 VIII.B.6.2. Reporting of adverse reactions/adverse events

166 Individual cases of suspected adverse reactions should be reported to national competent authority in 167 accordance with the applicable regulations and guidelines discussed in Module VI. Adverse events/adverse reactions collected in studies with primary and secondary data collection should be recorded and 168 169 summarized in the interim safety analysis and in the final study report. Procedures for the collection, 170 management (including a review by the MAH if appropriate), and reporting of suspected adverse 171 reactions/adverse events should be summarized in the study protocol. If appropriate, reference can be 172 made to the pharmacovigilance system master file (see Module II), but details specific to the study should 173 be described in the study protocol.

174

175 VIII.B.6.3. Study reports

176 VIII.B.6.3.1. Progress report and interim report of study results

177 The progress report is meant to document the progress of the study, for example, the number of patients 178 who have entered the study, the number of exposed patients or the number of patients presenting the 179 outcome, problems encountered, and deviations from the expected plan. The progress report may include 180 an interim report of study results.

- 181 The timing of the progress reports should be agreed on with the national competent authority and
- 182 specified in the study protocol when they have been agreed before the study commences. Study progress
- 183 should also be reported in any Periodic Safety Update Reports (PSURs) (see Module VII) and RMP updates
- 184 (see Module V), where applicable.
- 185 After review of the report, additional information may be requested.
- 186

187 VIII.B.6.3.2. Final study report

- 188 The final study report should be submitted as soon as possible within 12 months of the end of data 189 collection.
- 190 If a study is discontinued, a final report should be submitted and the reasons for terminating the study
- 191 should be provided.
- 192 The information to be included in the final study report should follow the format described below:
- 193 Title;
- 194 Abstract;
- 195 MAH name and address;
- 196 Investigators;
- 197 Milestones;
- 198 Rationale and background;
- 199 Research question and objectives;
- 200 Amendments and updates to the protocol;
- 201 Research methods;
- 202 Results;
- 203 Discussion;

- 204 Other information;
- 205 Conclusions;
- 206 References.
- 207
- 208 For more details, refer to Module VIII of the EMA's Guideline on good pharmacovigilance practices,
- through the following link:
- 210 https://www.ema.europa.eu/en/human-regulatory/post-authorisation/pharmacovigilance/good-
- 211 pharmacovigilance-practices#final-gvp-modules-section.
- 212
- 213 VIII.B.7. Quality systems, audits and inspections

214 The MAH should ensure the fulfilment of its pharmacovigilance obligations in relation to the study and

- that this can be audited, inspected and verified.
- 216 For PASS imposed as an obligation, the MAH should ensure that the analytical dataset and statistical
- 217 programs used for generating the data included in the final study report are kept in electronic format and
- are available for auditing and inspection. This provision should also be applied to PASS voluntarily initiated,
- 219 managed or financed by the MAH.
- 220

VIII.C. Operations of post-authorization safety studies inLebanon

223

224 VIII.C.1. Scope

- 225 Provisions in section VIII.C. refer specifically to PASS initiated, managed or financed by MAHs pursuant to
- 226 obligations imposed by the national competent authority in Lebanon.
- 227 Sections VIII.C.2. and VIII.C.3. apply to **both interventional and non-interventional PASS**.
- 228 Sections VIII.C.4. and VIII.C.5. apply to **<u>non-interventional PASS</u>**.
- 229
- 230

231 VIII.C.2. Procedure for imposing post-authorization safety studies

- PASS pursuant to an obligation imposed by the national competent authority are:
- 233
- 234 VIII.C.2.1: Requesting for Post-Authorization Safety Studies (PASS)
- 235 The conduct of any PASS can be:
- 236 **Request for a PASS as part of the initial marketing authorization application:**
- 237 A marketing authorization may be granted by the national competent authority subject to the conduct of
- a PASS.
- 239 **Request for a PASS during a post-authorization regulatory procedure:**
- 240 The need for a PASS could be identified by the national competent authority during a post-authorization
- 241 regulatory procedure, for example a variation to a marketing authorization.

242 **Request for a PASS due to an emerging safety concern:**

- After the granting of the marketing authorization, the national competent authority, where applicable,
- 244 may impose on the MAH an obligation to conduct a PASS if there are concerns about the risk of the
- authorized medicinal product, for example following evaluation of a safety signal (see Module IX).
- 246 This obligation should be duly justified based on benefit-risk considerations, should be notified in writing
- and should include the objectives and timeframe for the submission and conduct of the study.
- 248 The request may also include recommendations on key elements of the study (e.g. study design, setting,
- 249 exposure(s), outcome(s), study population). An overview of study designs and databases frequently used
- 250 in PASS is provided in EMA GVP.
- 251

252 VIII.C.2.2. Written observations in response to the imposition of an obligation

- 253 Within 30 days of receipt of the written notification of the obligation, the MAH may request the 254 opportunity to present written observations in response to the imposition of the obligation.
- 255 The national competent authority should specify a time limit for the provision of these observations. On
- the basis of the written observations submitted by the MAH, the national competent authority should
- 257 withdraw or confirm the obligation.

258 When the obligation is confirmed, the marketing authorization should be subject to variation to include 259 the obligation as a condition and the RMP, where applicable, should be updated accordingly (see Module 260 V).

261 VIII.C.2.3. Joint post-authorization safety studies

262 If safety concerns apply to more than one medicinal product, the national competent authority in Lebanon

- shall encourage the MAHs concerned to conduct a joint PASS. This can occur through the following:
- The national competent authority in Lebanon should support interactions between the MAHs concerned by sharing contact details among those that wish to participate in a joint study.
- 266 A dedicated meeting with national competent authority in Lebanon may be organized to support
- interactions between the MAHs and to provide suggestions for the joint study proposal and core elementsfor the study protocol.
- 269 Submissions of joint PASS follow the same requirements as single studies.
- 270 A single contact person for the submission should be appointed amongst all MAHs concerned and
- 271 specified in the cover letter. This person will be the primary contact point on all interactions with national
- 272 competent authority in Lebanon and will receive the documentation relevant for the procedure.
- The responsibility to communicate with the rest of the participants in the joint study lies with the appointed contact person as per the specific contractual arrangements among MAHs.
- The cover letter should include the full list of medicinal products and MAHs concerned by this joint PASS.
- 277 VIII.C.3. Impact on the risk management system
- All PASS imposed as a condition to the marketing authorization will be described in the RMP (see Module
 V) and their results provided in the PSUR following completion of the final report, where applicable (see
 Module VII).
- 281 All relevant sections/modules of the RMP should be amended to document the conduct of the study,
- including the safety specification, the pharmacovigilance plan, the RMP and the summary of activities, asappropriate.
- A copy of the study protocol approved by the national competent authority should be provided in annex6 of the RMP.

- 286 When a RMP does not exist, a new RMP should be developed referring to the PASS.
- 287 Other non-interventional PASS which are not obligations or required studies in the RMP but which could
- 288 provide relevant information on the safety profile of the product should be listed in the RMP section III –
- 289 "Summary table of additional pharmacovigilance activities".
- 290
- 291 VIII.C.4. Regulatory supervision of non-interventional post-authorization safety
- 292 studies
- 293 Non-interventional PASS conducted voluntarily or pursuant to obligations imposed by the competent 294 authority are supervised and assessed by the national competent authority in Lebanon. Necessary 295 approvals from IRB/REC should be obtained as well. Below is the link to access the list of authorized IRBs 296 in Lebanon:
- 297 <u>https://moph.gov.lb/userfiles/HealthCareSystem/Pharmaceuticals/ClinicalTrial/ListofAuthorizedIRBs</u>
 298 .pdf.
- 299
- 300 VIII.C.4.1. Roles and responsibilities of the marketing authorization holder
- Following the imposition of the obligation to conduct a non-interventional PASS in Lebanon as a conditionto the marketing authorization, the MAH should:
- Develop a study protocol according to the format and content specified in section VIII.B.5, and submit
 it to the national competent authority as appropriate. Prior to submission of the protocol, the MAH
 may submit a request for a pre-submission meeting in order to clarify specific aspects of the
 requested study (such as study objectives, study population, definition of exposure and outcomes)
 and to facilitate the development of the protocol in accordance with the objectives determined by
 the national competent authority;
- Prove that <u>the study is not a clinical trial</u>. The study may start only when the written endorsement
 from the national competent authority has been issued. National requirements should be followed
 to ensure the well-being and rights of participants in the study (see MR#1159/2014);
- After the study commence, submit any substantial needed amendments to the protocol, before their
 implementation, to the national competent authority in Lebanon (section VIII.B.5.2);
- Follow the requirements outlined in section VIII.B.6 for reporting pharmacovigilance data to the
 national competent authority;

- Submit study results as specified in section VIII.B.6.3. The final study report should be submitted to
- 317 the national competent authority in Lebanon within 12 months of the end of data collection unless a318 written waiver has been granted.
- 319

320 VIII.C.5. Changes to the marketing authorization following results from a non-

321 interventional PASS

- The MAH should evaluate whether the study results have an impact on the marketing authorization and should, if necessary, submit to the national competent authority an application to vary the marketing authorization. In such case, the variation should be submitted to the national competent authority with the final study report within 12 months of the end of data collection.
- Following the review of the final study report, the national competent authority may decide on the variation, suspension or revocation of the marketing authorization. The decision should mention any divergent positions and the grounds on which they are based and include a timetable for the implementation of this agreed action.
- 330 The agreed decision should be sent to the MAH and to the relevant departments within the national
- 331 competent authority which should adopt necessary measures to vary, suspend or revoke the marketing
- authorization in line with the implementation timetable stated in the decision.
- In case a variation is agreed upon, the MAH should submit to the national competent authority an
 appropriate application for a variation, including an updated Summary of Product Characteristics (SmPC)
 and package leaflet within the determined timetable for implementation.
- 336 The type and requirements of the variation is decided based on the variations section listed Decree #
- 337 571/2008 "Application of the provisions of Articles 3 and 5 of Law No 530 promulgated on July 16, 2003
- 338 (conditions of registering, importing, marketing and classifying pharmaceuticals)".
- 339 https://moph.gov.lb/files/media/docs/1460629329Marsoum5712008.pdf.
- 340 More urgent actions may be required in certain circumstances, for example, based on interim results
- included in progress reports (see also section VIII.B.6.3.1).
